DETAILED ACTION

1. This application is a 371 of PCT/JP05/06887 filed 03/30/2005 and claims priority to the following Japanese applications: JAPAN 2004-106668 filed 03/31/2004 and JAPAN 2004-374007 filed 12/24/2004.

Claims 1-13 are pending.

2. Election/Restrictions

Restriction is required under 35 U.S.C. 121 and 372.

This application contains the following inventions or groups of inventions which are not so linked as to form a single general inventive concept under PCT Rule 13.1.

In accordance with 37 CFR 1.499, applicant is required, in reply to this action, to elect a single invention to which the claims must be restricted.

Group I, Claims 1-13 drawn to compounds and compositions having a piperidine core (i.e. where in Formula I of claim 1 n is 1 and no other rings are formed by the piperidine ring substituents). If this group is elected, a further election of a single disclosed species of compound is also required. Further restriction based on the election may be made.

Group II, Claims 1-13 drawn to compounds and compositions having an azabicylooctane core (i.e. where in Formula I of claim 1 n is 1 and a carbocyclic ring is formed via a bridging ethyl group that is either R5 and R6 or R3 and R4 taken together). If this group is elected, a further election of a single disclosed species of compound is also required. Further restriction based on the election may be made.

Group III, Claims 1-13 drawn to compounds and compositions having an azabicylononane core (i.e. where in Formula I of claim 1 n is 1 and a carbocyclic ring is formed via a bridging propyl group that is either R5 and R6 or R3 and R4 taken together). If this group is elected, a further election of a single disclosed species of compound is also required. Further restriction based on the election may be made.

Group IV, Claims 1-13 drawn to compounds and compositions having a pyrrolidine core (i.e. where in Formula I of claim 1 n is 0 and no other rings are formed by the pyrrolidine ring substituents). If this group is elected, a further election of a single disclosed species of compound is also required. Further restriction based on the election may be made.

10/599,388 Art Unit: 1625

Group V, Claims -13 drawn to compounds and compositions having a core other than that of Groups I-IV. If this group is elected, a further election of a single disclosed species of compound is also required. Further restriction based on the election may be made.

The inventions listed as Groups I-V do not relate to a single general inventive concept under 35 USC 121 or PCT Rule 13.1 because:

PCT Rule 13.1 states that the international application shall relate to one invention only or to a group of inventions so linked as to form a single general inventive concept ("requirement of unity of invention").

PCT Rule 13.2 states that the unity of invention referred to in Rule 13.1 shall be fulfilled only when there is a technical relationship among those inventions involving one or more of the same or corresponding special technical features.

Annex B, Part 1(a), indicates that the application should relate to only one invention, of if there is more than one invention, inclusion is permitted if they are so slinked to form a single general inventive concept.

Annex B Part 1(b), indicates that "special technical features" means those technical features that as a whole define a contribution over the prior art.

Annex B Part 1(c), further defines independent and dependent claims. Unity of invention only is concerned in relation to independent claims. Dependent claims are defined as a claim that contains all the features of another claim and is in the same category as the other claim. The category of a claim refers to the classification of claims according to subject matter e.g. product, process, use, apparatus, means, etc.

Annex B Part 1(e), indicates that the permissible combinations of different categories of claims. Part 1(e)I, states that inclusion of an independent claim for a given product, an independent claim for a process specially adapted for the manufacture of the said product, and an independent claim for a use of the said product is permissible.

Annex B, Part 1(f), indicates the "Markush practice" of alternatives in a single claim. Part 1(f)I, indicates the technical relationship and the same or corresponding special technical feature is considered to be met when (A) all alternatives have a common property or activity, and (B) a common structure is present or all alternatives belong to a recognized class of chemical compounds. Further defining (B), Annex B, Part 1(f)(i-iii), the common structure must; a) occupy a large portion of their structure, or b) the common structure constitutes a structurally distinctive portion, or c) where the structures are equivalent and therefore a recognized class of chemical compounds, each member could be substituted for one another with the same intended result. That is, with a common or equivalent structure, there is an expectation relationship and the corresponding special technical feature result from a common (or equivalent) structure that is responsible for the common activity (or property). Part 1(f) iv, indicates that when all alternatives of a Markush grouping can be differently classified, it shall no, take alone, be considered justification for finding a lack of unity. Part 1(f)v, indicates that

"When dealing with alternatives, if it can be shown that at least *one* Markush alternative is not novel over the prior art, the question of unity of invention shall be reconsidered by the examiner"

Application/Control Number:

10/599,388 Art Unit: 1625 Page 4

In the instant case, at least one Markush alternative is not novel because prior art by WO 2002/89803 A1, (cited on the IDS) recites the compounds of the instant case. A compound from page 109 is shown below:

製造例48

$$N-[3-(3-7ミジノフェニル)-2-(E)-プロペニル]-N-[3-クロ ロ-4-(1-ホルムイミドイルピペリジン-4-イルオキシ)フェニル]スルファモイル酢酸 2塩酸塩$$

Thus the lack of a special technical feature is apparent.

3. Applicant is advised that the reply to this requirement to be complete must include (i) an election of a species or invention to be examined even though the requirement be traversed (37 CFR 1.143) and (ii) identification of the claims encompassing the elected invention.

The election of an invention or species may be made with or without traverse. To reserve a right to petition, the election must be made with traverse. If the reply does not distinctly and specifically point out supposed errors in the restriction requirement, the election shall be treated as an election without traverse.

Should applicant traverse on the ground that the inventions or species are not patentably distinct, applicant should submit evidence or identify such evidence now of record showing the inventions or species to be obvious variants or clearly admit on the record that this is the case. In either instance, if the examiner finds one of the inventions unpatentable over the prior art, the evidence or admission may be used in a rejection under 35 U.S.C.103(a) of the other invention. Applicant is reminded that upon the cancellation of claims to a non-elected invention, the inventorship must be amended in compliance with 37 CFR 1.48(b) if one or more of the currently named inventors is no longer an inventor of at least one claim remaining in the application. Any amendment of inventorship must be accompanied by a request under 37 CFR 1.48(b) and by the fee required under 37 CFR 1.17(i).

Please Note: Claims 4-6, 8-13 are drawn to compounds and compositions, despite the recitation of functional language "pest control agent" "insecticide", "acaricide", they are drawn to the same materials repeated in triads. Functional language as that of the instant claims carries no

10/599,388 Art Unit: 1625

patentable weight in claims for compositions of matter see *Union Oil Co. of California v. Atlantic Richfield Co.* 54 USPQ2d 1227 where "composition claims cannot, as the appellant refiners argue, embrace only certain uses of that composition. (citing In Re Spada) Otherwise these composition claims would mutate into method claims." It is recommended that claims 4-6, 8-13 be rewritten to reflect one sets of claim groups as simple compositions without intended use. Should method claims be presented they may be considered if dependent from allowable product claims.

Conclusion

4. Any inquiry concerning this communication or earlier communications from the examiner should be directed to David K. O'Dell whose telephone number is (571) 272-9071. The examiner can normally be reached on Mon-Fri 7:30 A.M.-5:00 P.M EST.

If attempts to reach the examiner by telephone are unsuccessful, the examiner's Primary examiner, Rita Desai can be reached on (571)272-0684. The fax phone number for the organization where this application or proceeding is assigned is 571-273-8300.

Information regarding the status of an application may be obtained from the Patent Application Information Retrieval (PAIR) system. Status information for published applications may be obtained from either Private PAIR or Public PAIR. Status information for unpublished applications is available through Private PAIR only. For more information about the PAIR system, see http://pair-direct.uspto.gov. Should you have questions on access to the Private PAIR system, contact the Electronic Business Center (EBC) at 866-217-9197 (toll-free). If you would like assistance from a USPTO Customer Service Representative or access to the automated information system, call 800-786-9199 (IN USA OR CANADA) or 571-272-1000.
